

## Clever space saving solutions

Rapid Racking designers are highly experienced and can make the best possible use of valuable space. Installing a Two Tier shelving system or mezzanine floor provides storage, work areas, or even additional office.

Making your storage perform at its best . . .

## Systems to help efficient working

'Live' systems can move the product closer to the picker, or move the shelving to create more space. Mobile Shelving Systems dramatically increase storage in a given area, or alternatively reduce the area that the system occupies. 'Carton flow' allows product to flow to a pick face or can be used as 'Push-Back'.
