

# Mobile Shelving

*Mobile shelving is designed to provide efficient storage and retrieval, whilst maximising the use of the floor space available. It will also give excellent accessibility to stored items.*

*This high density storage system can double the storage capacity of conventional static shelving while freeing up valuable floor space.*

*Mobile shelving systems are a most effective way of saving space, as they eliminate the need for several access aisles. Because the shelving moves along floor tracks, the space for only one aisle is needed. When an item is required the particular shelving bay is identified and an adjacent aisle is created by moving the mobile units apart. Mobile shelving is opened and closed by either hand operated pull handles, hand wheel driven mechanical systems or electrically operated with push button control.*

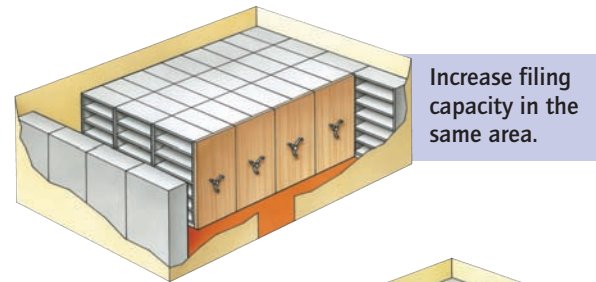

Hand operated push/pull system

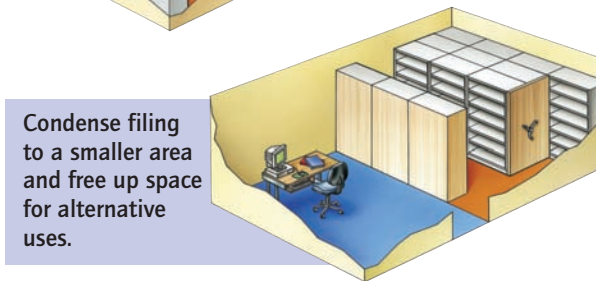

Mechanically assisted hand wheel system

Electrically operated push button system

Increase filing capacity in the same area.

Condense filing to a smaller area and free up space for alternative uses.

# Office mobile solutions

- With office space at a premium, the mobile option will allow extra storage with no need for additional floor space
- Installed quickly and easily with minimum disruption
- Choice of manually assisted or electronically controlled operation
- Decorative front panels are available to tailor the system to match the surrounding environment

# Archive and Document Storage

- Mobile systems are ideal for sensitive or expensive items that are stored because the systems can be closed or locked to restrict access
- Mobile shelving systems give excellent accessibility, whilst maximising the available floor space for storage
